## 1 - About this update Edit

The purpose of this update it to resolve some issues with the in-game server-list features of **Fistful of Frags (FoF)**.

In particular, the preview thumbnails (images) used to show which map is currently in use on each of the servers shown in the **FoF** multi-player interface.

Currently, the last official update to thumbnail previews a almost **two (2)** years ago, and only included thumbnail previews for "official" maps. This results in many servers being shown with the generic "**Custom Map**" icon, instead of an actual preview thumbnail of the map they are currently running.

In short, what this update does, is to accomplish this:

## 2 - Wait, which "server-list"? Edit

Fists of Frenzy (FoF) actually has **two** different lists of servers, which are related but not the same. This can cause some confusion, especially for new players.

These **two** server-list features are:

- The "**Highlighted Server Browser**" (or **HSB**). list.
- The "**Full**" server-list.

### Highlighted Server Browser (or HSB):

- This is the screen you see when you first enter the game, showing thumbnail preview images of different maps running on available game-servers. Because of its visual nature (images), this is referred-to as the **Highlighted Server Browser** (or **HSB**).
- This feature is how most **Fists of Frenzy (FoF)** players find and connect to servers to play the game. This is *especially* true for those new to the game.
- This list is *heavily curated* to *only include select servers* that are "known-good" so-to-speak. By default, the behind-the-scenes source for the **HSB** server-list is *only updateable by the game developer directly*. Unfortunately, the developer has been effectively *missing-in-action* for some time.
- Unfortunately, **FoF** currently only includes preview thumbnails for maps that shipped with the game at the time of its last update - nearly **two (2)** years ago. So no preview thumbnails are included for any custom maps released by the community - resulting in the generic "**Custom Map**" icon being shown instead of an actual map preview.
- This update installs map preview thumbnails for a *wide-array of community-generated maps*. Installing this update will replace the generic **Custom Map** with an actual preview

- On the initial screen, there is also a **Find Servers** option. This will display a more complete list of current **Fistful of Frags (FoF)** game-servers, but *without any map-preview images*.
- This feature is how many **Fistful of Frags (FoF)** long-term players find and connect to servers to play the game. In particular the "**Favorites**" tab is used extensively by experienced players.

- That list is also entirely **un-curated**, and may contain servers that are too electronically distant from you to be playable, or are otherwise problematic.
- This update **does not alter the way that "Full" server list works in any way**.
- If you use this feature and like it, please feel free to continue doing-so. I still recommend you apply the update. However, if you rarely use the **HSB** you may see little benefit.

### 3 - Prerequisites (things you need before updating) [Edit](#)

Things you need to **do** or **know** *before* updating:

- You must already have **Fistful of Frags (FoF)** installed.
- If you have **Fistful of Frags (FoF)** open, close it.
- If you did NOT install **FoF** to the default location, you must know *exactly* where you installed it. The default location (on Windows) is typically:

```
C:\Program Files (x86)\Steam\steamapps\common\Fistful of Frags
```

- For example, you might have installed it to a different Steam "Library" on a different hard-drive, resulting in it being installed somewhere such as:

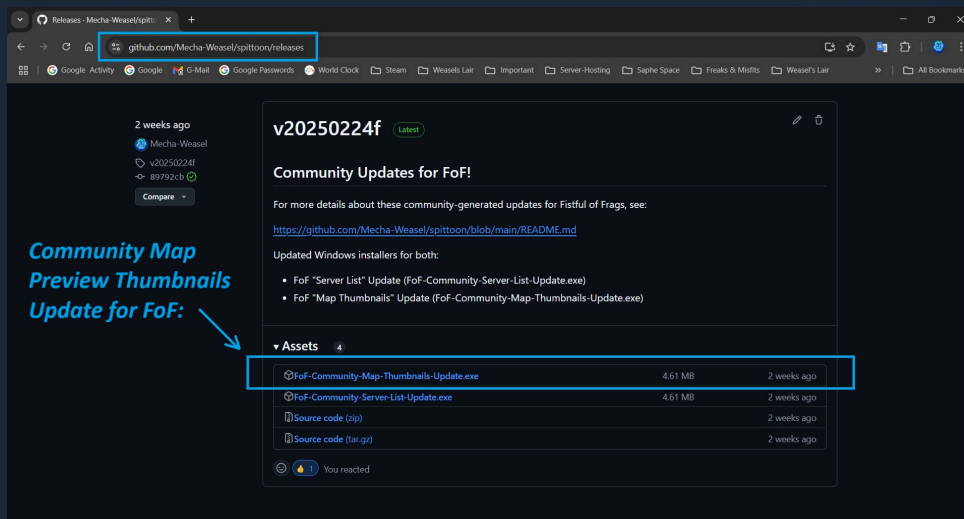

```
D:\SteamLibrary\steamapps\common\Fistful of Frags
```

**NOTE:** You may need to be an "Administrator" on your computer to be able to install software.

### 4 - Where to get the update? [Edit](#)

The **Windows installation program** for the community **thumbnail update** for **Fistful of Frags (FoF)** is hosted in the "**Project Spittoon**" **GitHub** [github.com] . Specifically, the current "release" version is available in the "**releases**" page [github.com] .

```
https://github.com/Mecha-Weasel/spittoon/releases
```

### 5 - How to install the update (using the installer) [Edit](#)

**NOTE:** An automated installer program is *only available for Windows*. For **Linux** desktop installations, please see notes further in this guide regarding **manual installation**.

To start the installer program (**FoF-Community-Map-Thumbnail-Update.exe**), just double-click on it - in whatever Windows folder you downloaded it to from your web-browser. Typically, this defaults to your "**Downloads**" folder.

### 6 - Potential Windows warning [Edit](#)

When to try to start the update installer program, Windows may warn that you are trying to run an "unrecognized program" or "unrecognized app", as shown below:

If so, you will need to click the "More info" option, to display the "Run anyway" button to proceed, as shown below:

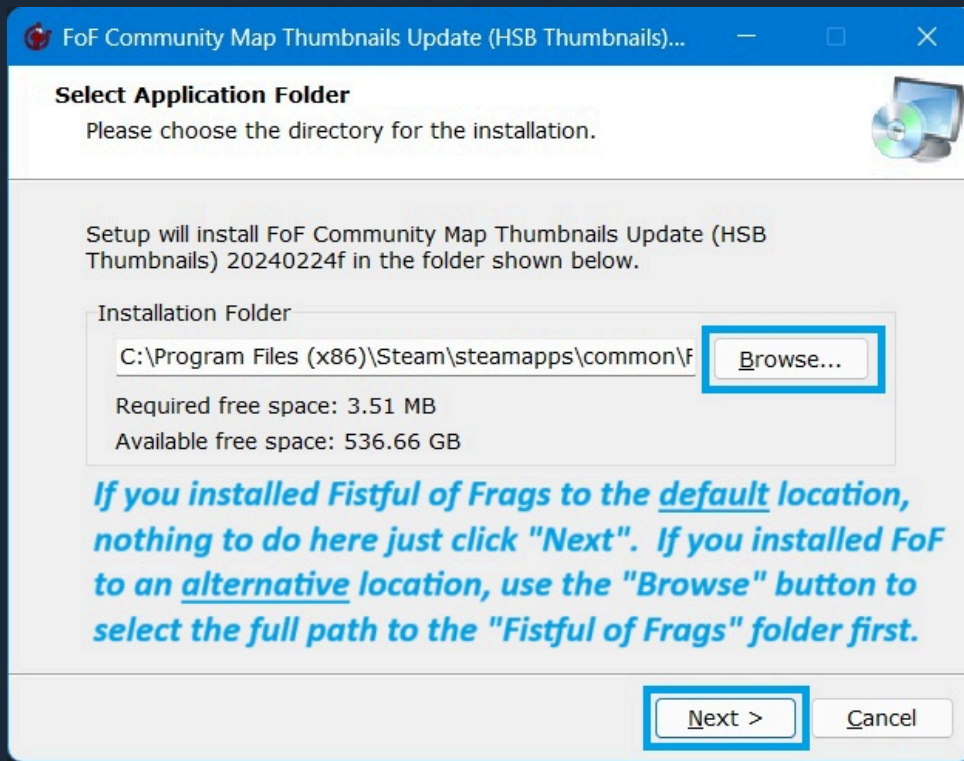

## 7 - Update installation prompts Edit

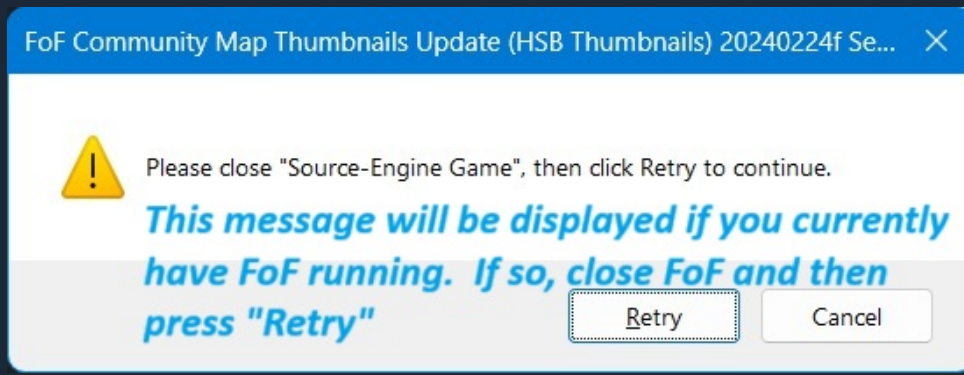

Once you start the installer program, it will prompt you to select a language. This is the language the installer program itself will use, and has no bearing or effect on your existing **Fistful of Frags (FoF)** installation. Select the language you would like, and/or click the **Next** button to continue.

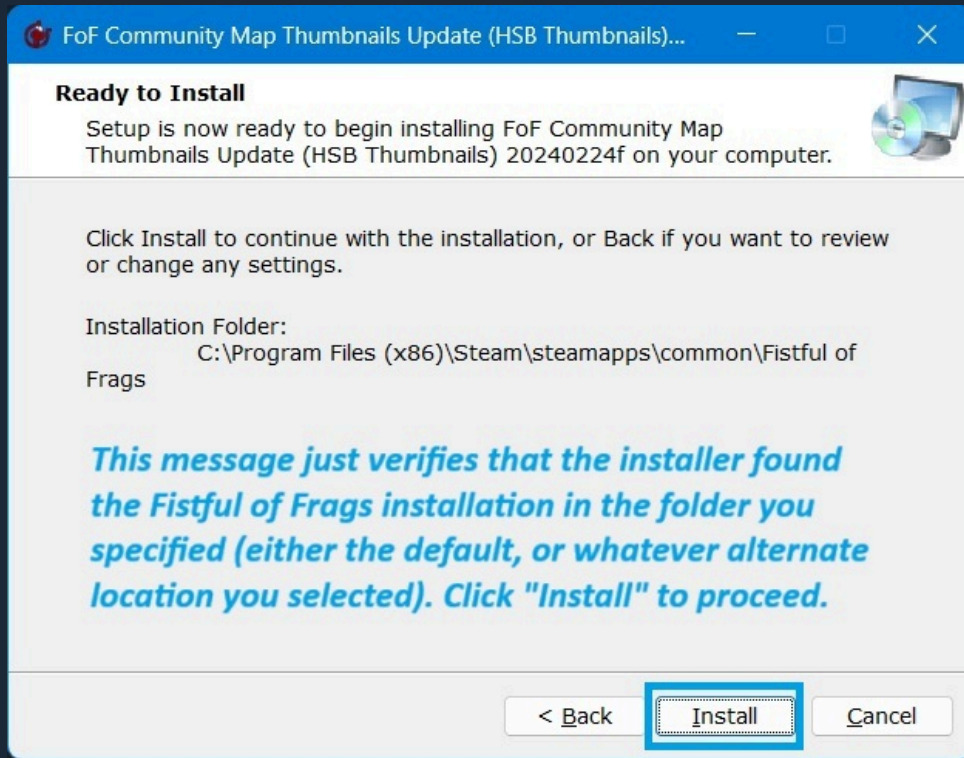

On the next screen, you have the opportunity to select where your *existing* **Fistful of Frags (FoF)** is located. If you have installed to some alternative location (such as a Steam "Library" setup on a secondary drive), use the **Browse** button to select the "Fistful of Frags" folder. Click **Next** to continue.

If you forgot to exit **FoF** (or have any other video-game currently running that happens to be based on the same "Source" game-engine) an error will be displayed - giving you an opportunity to switch back to that game and exit it, before continuing with the update installation.

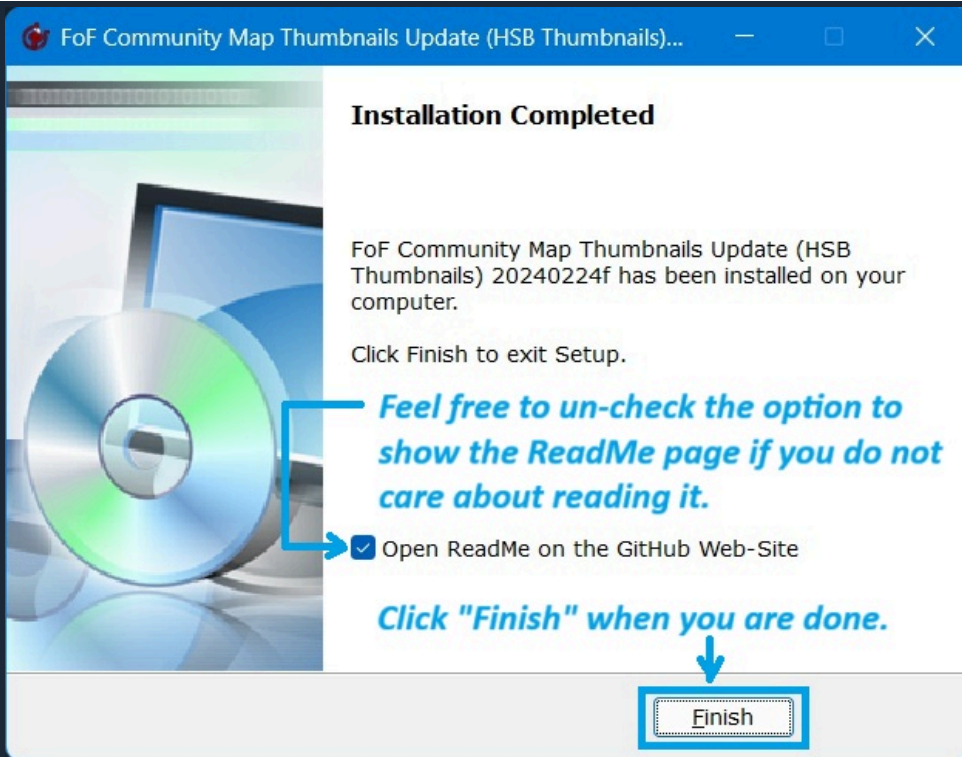

If a valid existing **Fistful of Frags (FoF)** installation is *NOT detected* at the location you select, an error will be displayed, and the installation of the update will be **cancelled**. Otherwise, the next screen shown will display the location where the installer is about to apply the update to. Click **Next** to continue.

After the update installation completes, a screen will be displayed indicating so. You may click the **Finish** to close the installer.

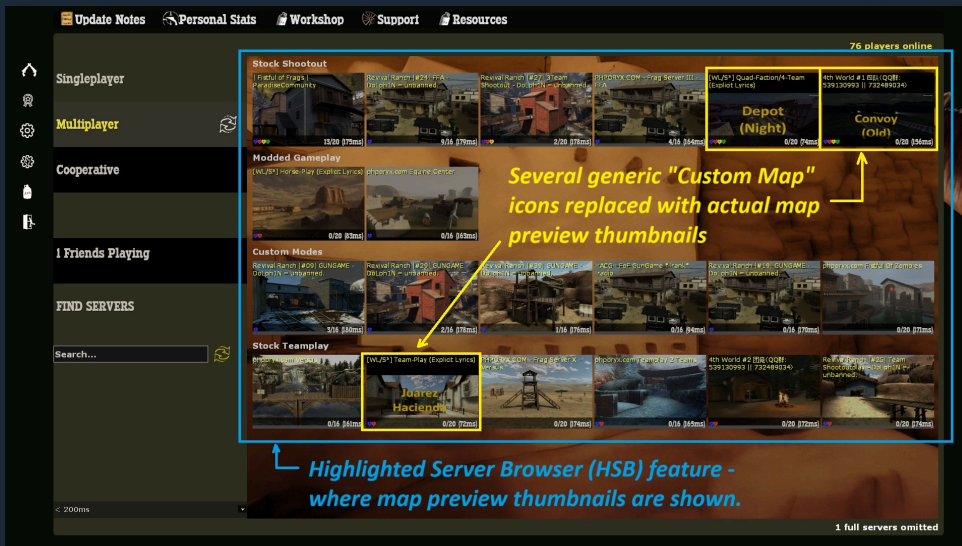

## 8 - How to use the update Edit

Once the update is successfully installed (either using the installer program or manually), just use **Fistful of Frags (FoF)** like normal. The only difference you should see less of the generic **"Custom Map"** icon in the preview thumbnails shown in the **Highlighted Server Browser (HSB)** area of the screen.

For example, you may notice some map thumbnail previews that previously were not displayed:

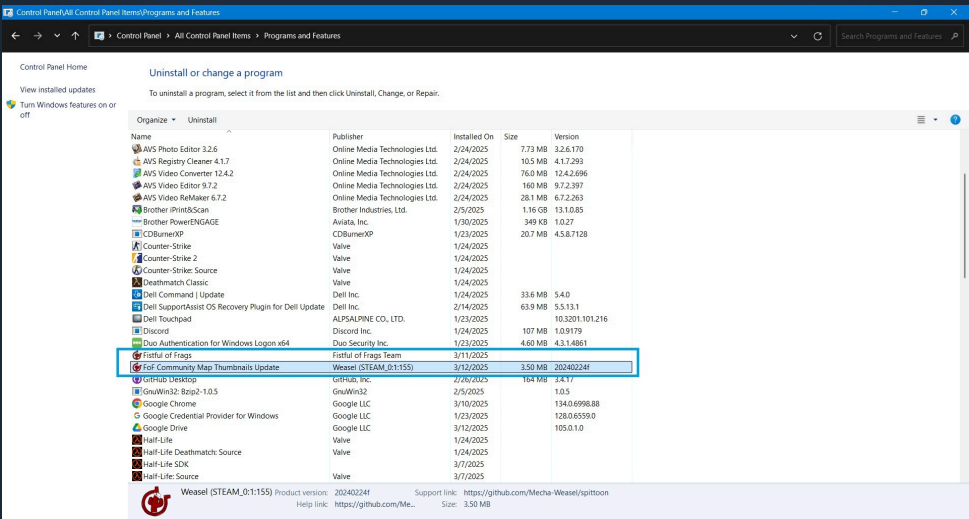

Of course, exactly which servers you see listed will vary greatly based on your location / region, communication rates (pings) to various servers, whether or not a server is full, etc.

Also, you can still play on servers that do not show-up in the HSB at all - by finding them in the **"Full" server list**, and right-click on them to add them to your "Favorites" tab.

## 9 - How to uninstall the update (if installed using the installer) Edit

If you installed this update using the Windows installer program, it should show-up in Windows **Control Panel**, under the **"Programs and Features"** area - just like any other Windows program.

The update can be uninstalled from there. For additional information, see also the uninstallation notes in the GitHub:

```
https://github.com/Mecha-Weasel/spittoon/blob/main/FoF-Community-Map-Thumbnails-Update.md#uninstallation-installer
```

10 - How to install the update (manually) Edit

To install this update *manually* (either on **Windows** *without using the installer program*, or on a **Linux** desktop client), please refer to the instructions in the GitHub:

```
https://github.com/Mecha-Weasel/spittoon/blob/main/FoF-Community-Map-Thumbnails-Update.md#installation-manual
```

11 - How to uninstall the update (manually) Edit

If you installed the update *manually* (either on **Windows** *without using the installer program*, or on a **Linux** desktop client), please refer to the instructions in the GitHub:

```
https://github.com/Mecha-Weasel/spittoon/blob/main/FoF-Community-Map-Thumbnails-Update.md#uninstallation-manual
```

12 - Who created this update? Edit

This update was created by **Weasel**, with the *a lot of assistance* from various server operators and/or active players that among the broader **Fistful of Frags (FoF)** community, including (but not necessarily limited to):

- **Weasel** (as mentioned above) = A long-time community server operator for **FoF** (and other games, dating back to 1999).
- **Judge** = A long-time **FoF** community advocate / community organizer, active player and some-time server operator.
- **Paralhama** = A long-time active **FoF** player, server operator, and community map contributor.
- **Wolfgang** = A long-time active **FoF** player.

Speaking of the broader **Fistful of Frags (FoF)** community, *numerous additional players* from several Discord-based communities have participated in testing this update, including:

- The "**Saloon**" (a long-established FoF-supportive community)
- The "**Salty Spitoon Saloon**" (a recently-established community for active FoF advancement).
